

Abhijay Salvi

(317) 993-9169 — abhijaysalvi5@gmail.com — LinkedIn — GitHub — Portfolio — U.S. Citizen

EDUCATION

Georgia Institute of Technology (GT), Atlanta, GA

August 2024 – May 2028

Bachelor of Science in Computer Science and Math Minor, GPA: 3.95/4.00

Relevant Coursework: Computer Architecture, Data Structures and Algorithms, Intro to AI, Discrete Math, Linear Algebra

WORK EXPERIENCE

Software Development Engineering Intern (Stores Foundational AI) Amazon

September 2026 – Present

- Building RL as a Sandbox service to optimize GPU allocation and save compute costs during LLM training (metrics TBA)
- Developing CLI tool integration with Claude Code and Codex for users to decrease idea to deployment times (metrics TBA)

Software Engineering Intern (Machine Intelligence) - Draper

June 2026 – August 2026

- Developed scripts for anomaly detection and statistical analysis for guidance systems using PyTorch, NumPy, Pandas
- Led codebase restructuring for 7-person agile team; managed sprint planning and tracking in Jira
- Applied an internal LLM tool, to automate System-on-a-Chip testing and hardware-in-the-loop testing by 50%
- Tracked prompt-response pairs, error rates, and usage to debug failure patterns and improve internal LLM reliability by 15%

AI Engineer (Resilience Intelligence) - Earthena AI

May 2026 – July 2026

- Built and deployed via GCP a 3-agent LangGraph pipeline for supply chain facility discovery, reducing research time by 70%
- Engineered PostgreSQL facility database and cache indexing of 100K+ records across 100+ countries

Software Engineering Intern (Physical Automation & Robotics) - UPS

June 2025 – August 2025

- Implemented boundary detection and real-time control for autonomous warehouse navigation using Boston Dynamics SDK
- Built a React/Next.js + REST API dashboard to monitor and control Boston Dynamics Spot warehouse operations
- Trained PyTorch + OpenCV model for real-time package overflow detection, achieving 95% precision

Software Engineering Intern (Innovation and R&D) - Performance Services Inc.

March 2024 – August 2024

- Built a Flask research platform for 20+ Marketing and PR members, reducing data aggregation workflows by 75%
- Integrated CustomGPT chatbot across internal and public web apps, improving retrieval efficiency 85%
- Re-architected Python + PyTorch NLP pipeline for machinery tagging, boosting throughput by 150%

PROJECTS

Waresport - AI-powered Operating System for Sports Clubs

[Waresport Project Link](#)

- Built TypeScript + Python + MongoDB SaaS platform with a 7-person team, scaling to 20+ clients
- Designed rule-based scheduling algorithm with OpenAI API integration, reducing management time 90%
- Deployed SaaS platform to production on AWS with GitHub Actions CI/CD and Docker containers

SurgeVue - 1st place in AR/VR & 3rd place Overall @ PennApps

[SurgeVue Project Link](#)

- Achieved 97% tumor detection accuracy by fine-tuning a pretrained model for real-time MRI frame analysis with AR overlay
- Architected a full-stack Firebase web app with an integrated 3D brain tumor modeling system in Matplotlib for exploration

PerfectPunch - 2nd place in Sports Track @ Hacklytics

[PerfectPunch Project Link](#)

- Built a custom RAG pipeline with Gemini LLM to generate contextual AI coaching insights from real-time fight analytics
- Engineered low-latency async pipeline processing live video via OpenCV + PyTorch at 95% accuracy

HAVEN - Hazard Alert & Visual Emergency Network

[HAVEN Project Link](#)

- Built AI hazard intelligence platform using Next.js + Flask, converting crowdsourced photos into verified real-time incidents
- Integrated Google Maps API for dynamic safe-zone routing, computing nearest shelter and evacuation path using A*

RESEARCH

Phoneme-Guided Neural Speech Clarification for Improved Audio Accessibility @ GT-Europe

- Improved transcription clarity 20% via ASR and wav2vec2 pipeline to detect and replace unclear phonemes

Independent Machine Learning Researcher under CalTech Ph.D. Candidate

- Developed and benchmarked state of the art models on NOAA datasets, improving drought prediction accuracy by 18%

SKILLS

Languages and Databases: Python, Java, C, JavaScript/TypeScript

Frameworks & Tools: React, Next.js, Node.js, Flask, PyTorch, OpenCV, Docker, Git, GitHub Actions, REST APIs, pytest

Concepts: Full-Stack Development, Computer Vision, Data Pipelines, LLM Integration, RAG Architecture, RL
